

Add Multiple Lines

```
content.append(Paragraph("Name: Jean", styles["Normal"]))
content.append(Paragraph("Age: 23", styles["Normal"]))
```

5. Merge PDFs

```
from PyPDF2 import PdfMerger

merger = PdfMerger()
merger.append("file1.pdf")
merger.append("file2.pdf")

merger.write("merged.pdf")
merger.close()
```

6. Split PDF

```
from PyPDF2 import PdfReader, PdfWriter

reader = PdfReader("file.pdf")
writer = PdfWriter()

writer.add_page(reader.pages[0])

with open("page1.pdf", "wb") as f:
    writer.write(f)
```

1. Read PDF

```
from PyPDF2 import PdfReader

reader = PdfReader("file.pdf")

for page in reader.pages:
    print(page.extract_text())
```

👉 Reads text from PDF ✓

2. Get PDF Info

```
print(len(reader.pages))    # number of pages
```

3. Create PDF (Best way)

```
from reportlab.platypus import SimpleDocTemplate, Paragraph
from reportlab.lib.styles import getSampleStyleSheet

doc = SimpleDocTemplate("output.pdf")

styles = getSampleStyleSheet()
content = []

content.append(Paragraph("Hello Jean", styles["Normal"]))

doc.build(content)
```

👉 Creates a PDF file ✓
